

# Stratasys Medical Modeling Solutions

If you're an academic medical center, hospital or medical device company, we've got a medical modeling solution for you. Check out our medical modeling options below to determine what printer will be the best fit for your medical applications.

## J5 MediJet™

The economical, compact, all-in-one medical modeling printer.

## J750 Digital Anatomy™

Our most advanced medical modeling printer gives you the power to create biomechanically accurate anatomical models.

<b>Key value prop</b>	Multi-material and multicolor capabilities allow you to create brilliantly vivid anatomical models and drilling and cutting guides* that are sterilizable and biocompatible, with a certified system — all on one platform.	If you're looking to create advanced medical models that not only look the same but also have close to the same biomechanical properties of native tissue and bone — this is the solution for you.
<b>Certifications</b>	<ul style="list-style-type: none"> <li>• 510k cleared for clinical diagnostic use with leading segmentation vendors</li> <li>• Biocompatibility certification (documents available upon request)             <ul style="list-style-type: none"> <li>- ISO 10993-1:2018 for limited contact to tissue and bone contact and permanent contact to intact skin</li> <li>- ISO 18562-1:2017 for breathing gas pathways in healthcare applications</li> </ul> </li> <li>• Sterilization methods             <ul style="list-style-type: none"> <li>- Steam, Gamma and EtO for MED610 and MED615RGD</li> <li>- Steam, Gamma, and EtO for Rigid Transparent family</li> </ul> </li> <li>• ISO 13485 certified (material and hardware manufacturing sites)</li> </ul>	<ul style="list-style-type: none"> <li>• 510k cleared for clinical diagnostic use with leading segmentation vendors</li> <li>• Biocompatibility certification (documents available upon request)             <ul style="list-style-type: none"> <li>- ISO 10993-1:2018 for limited contact to tissue and bone contact and permanent contact to intact skin</li> <li>- ISO 18562-1:2017 for breathing gas pathways in healthcare applications</li> </ul> </li> <li>• Sterilization methods             <ul style="list-style-type: none"> <li>- Steam, Gamma and EtO for MED610 and MED615RGD</li> </ul> </li> <li>• ISO 13485 certified (material and hardware manufacturing sites)</li> </ul>
<b>Applications</b>	<ul style="list-style-type: none"> <li>• Pre-surgical planning models</li> <li>• Training and education models</li> <li>• Surgical guides and tooling*</li> <li>• Medical device development models</li> </ul>	All models can mimic close to the same biomechanical properties as native tissue and bone enabling you to cut, suture, drill and insert devices just as you would with human anatomy. <ul style="list-style-type: none"> <li>• Pre-surgical planning models</li> <li>• Training and education models</li> <li>• Medical device development models</li> </ul>

\* with approved 3rd party 510k cleared segmentation software
